

1 Hour Session and
Learning Collaborative

**COPD & Asthma
Medication Management**

Thursday, April 8th 2021

12:00pm-1:00pm

1:00pm-1:30pm (LC Participants)

**Learning Collaborative
Participants Please remain on the
WebEx following presentation**

OneCare Vermont

onecarevt.org

Welcome

Norman Ward, MD
Chief Medical Officer

Agenda:

Session held via Microsoft Teams

| | Presenter | Time |
|---------------------|---|------------|
| Noon- 12:05pm | Norman Ward, MD Chief Medical Officer, OneCare Vermont Introduction & Session Logistics | 5 Minutes |
| 12:05pm- 12:45pm | Amy Yanicak, PharmD, MPH, CDE, Assistant Professor of Pharmacy Practice Albany College of Pharmacy | 40 Minutes |
| 12:45pm- 1:00pm | Q&A | 15 Minutes |

Presenter Bio: Amy Yanicak, PharmD, MPH, CDE

Amy is a clinical ambulatory care pharmacist and diabetes educator at Richmond Family Medicine. She is also an Assistant Professor in Pharmacy Practice at the Albany College of Pharmacy and Health Sciences - Vermont Campus. She completed her degrees at the University of South Carolina, a PGY1 residency in Pharmacy Practice at Providence St Peter Hospital in Olympia, WA, and a PGY2 residency in Family Medicine at University of Washington in Seattle. At Richmond Family Medicine, she works with providers on disease state management and population health projects, such as discontinuing aspirin use or correct inhaler technique counseling. She thoroughly enjoys working collaboratively with patients and their providers to get them off of medications that they don't receive benefit from in addition to optimizing the ones they need. She works with patients on diabetes, hypertension, pain, weight loss, asthma, and COPD management. She is available for provider appointments or to call if you have a medication question!

Session Learning Objectives

1. Describe the epidemiology, pathophysiology, diagnosis, treatment guidelines or standards of care and patient specific pharmacotherapy for a disease state
2. Identify innovative areas of research and advancement in the field of pharmacotherapy or new factors which impact the profession and the practice of pharmacy
3. Specify new techniques or methods to optimize patient care outcomes and ensure patient safety
4. Recall new health policies, regulations or issues that affect the profession and practice of pharmacy

Accreditation Designation Statement

In support of improving patient care, The Robert Larner College of Medicine at The University of Vermont is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

The University of Vermont designates this live activity for a maximum of 1AMA PRA Category 1 Credit(s)™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

This program has been reviewed and is acceptable for up to 1 Nursing Contact Hours.

As a Jointly Accredited Organization, The Robert Larner College of Medicine at the University of Vermont is approved to offer social work continuing education by the Association of Social Work Boards (ASWB) Approved Continuing Education (ACE) program. Organizations, not individual courses, are approved under this program. State and provincial regulatory boards have the final authority to determine whether an individual course may be accepted for continuing education credit. The University of Vermont maintains responsibility for this course. Social workers completing this course receive 1 continuing education credits.

This activity was planned by and for the healthcare team, and learners will receive 1Interprofessional Continuing Education (IPCE) credit for learning and change.

NOONTIME KNOWLEDGE: ASTHMA AND COPD

PRESENTED BY AMY YANICAK, PHARMD, MPH, CDCES

ASSISTANT PROFESSOR OF PHARMACY PRACTICE ALBANY COLLEGE OF PHARMACY
AND HEALTH SCIENCES (COLCHESTER, VT CAMPUS)

CLINICAL PHARMACIST AT RICHMOND FAMILY MEDICINE

DISCLOSURES

- Nothing to disclose

OBJECTIVES

At the completion of this activity, the pharmacist will be able to:

- 1. Describe the epidemiology, pathophysiology, diagnosis, treatment guidelines or standards of care and patient specific pharmacotherapy for a disease state
- 2. Identify innovative areas of research and advancement in the field of pharmacotherapy or new factors which impact the profession and the practice of pharmacy
- 3. Specify new techniques or methods to optimize patient care outcomes and ensure patient safety
- 4. Recall new health policies, regulations or issues that affect the profession and practice of pharmacy

KNOWLEDGE CHECK

RESCUE INHALER

What is the most appropriate agent for a 33 year old female newly diagnosed with mild asthma who reports symptoms 2-3 times per month?

- A. Terbutaline 0.5mg 1 puff q4h prn for shortness of breath or wheezing
- B. Proair 90mcg 1-2 puffs q4t6hr prn for shortness of breath or wheezing
- C. Pulmicort 90mcg 1 puff BID and Ventolin 90mcg 1-2 puffs q4t6hr prn shortness of breath or wheezing
- D. Symbicort 80/4.5 1-2 puffs q4-6 hr prn for shortness of breath or wheezing

CORRECT INHALER USE

- What words correctly describe a patient's inhalation technique with a Dry Powder Inhaler?

A. Forceful

B. Deep

C. Slow

D. Quick

E. Breathe-Actuated

BBW ADDED

- Which medication had a block box warning added in 2020 for risk of serious neuropsychiatric events?
- A. Trelegy
 - B. Chantix
 - C. Montelukast
 - D. Mepolizumab

TRIPLE THERAPY USED FOR

- What is triple therapy of LABA/LAMA/ICS (Trelegy Ellipta) approved for?
 - A. Asthma
 - B. COPD
 - C. Acute Bronchospasm
 - D. Both Asthma and COPD

ASTHMA

- Reversible airway disease
 - Up to 35% of patients will have a “normal” physical exam
- Assessed by:
 - Symptom control
 - Risk factors

What is NOT Asthma?

- Persistent cough
- COPD
- GERD
- Bronchitis
- Respiratory infection
- COVID

Global Initiative for Asthma. Global Strategy for Asthma Management and Prevention, 2020. Available from: www.ginaasthma.org

COVID CONSIDERATIONS

- Have a written asthma action plan
- Avoid nebulizer use around others
- Avoid spirometry with suspected COVID
- Benefits of continuing steroids outweighs the risk

Study says inhalers OK to use amid COVID-19 concern (News Release), July 9, 2020, Huddersfield, England, ScienceDaily, accessed July 13, 2020

EVERYONE GETS ICS!

- SABA alone (Such as albuterol only) no longer recommended for asthma
- ICS (inhaled corticosteroid) controller
 - Reduces risk of serious exacerbations
 - Better symptom control
- Low dose ICS-formoterol is preferred
 - Alternative: low-dose ICS whenever SABA is taken

Box 3-5A

Adults & adolescents 12+ years

Personalized asthma management:

Assess, Adjust, Review response

Symptoms
Exacerbations
Side-effects
Lung function
Patient satisfaction

Confirmation of diagnosis if necessary
Symptom control & modifiable risk factors (including lung function)
Comorbidities
Inhaler technique & adherence
Patient preferences and goals

Treatment of modifiable risk factors and comorbidities
Non-pharmacological strategies
Asthma medications (adjust down or up)
Education & skills training

Asthma medication options:

Adjust treatment up and down for individual patient needs

PREFERRED CONTROLLER
to prevent exacerbations and control symptoms

Other controller options

PREFERRED RELIEVER

Other reliever option

STEP 1

As-needed low dose ICS-formoterol *

Low dose ICS taken whenever SABA is taken †

STEP 2

Daily low dose inhaled corticosteroid (ICS), or as-needed low dose ICS-formoterol *

Daily leukotriene receptor antagonist (LTRA), or low dose ICS taken whenever SABA taken †

As-needed low dose ICS-formoterol *

As-needed short-acting β_2 -agonist (SABA)

STEP 3

Low dose ICS-LABA

Medium dose ICS, or low dose ICS+LTRA #

As-needed low dose ICS-formoterol for patients prescribed maintenance and reliever therapy‡

STEP 4

Medium dose ICS-LABA

High dose ICS, add-on tiotropium, or add-on LTRA #

STEP 5

High dose ICS-LABA
Refer for phenotypic assessment ± add-on therapy, e.g. tiotropium, anti-IgE, anti-IL5/5R, anti-IL4R

Add low dose ICS, but consider side-effects

* Data only with budesonide-formoterol (bud-form)
† Separate or combination ICS and SABA inhalers

‡ Low-dose ICS-form is the reliever only for patients prescribed bud-form or BDP-form maintenance and reliever therapy
Consider adding HDM SLIT for sensitized patients with allergic rhinitis and FEV1 >70% predicted

ADDITIONAL SUPPORTING EVIDENCE

- Two additional RCTs of as-needed low dose budesonide-formoterol in mild asthma
 - 12-month studies, open-label, no twice-daily placebo, i.e. the way it would be used in real life
 - Novel START (*Beasley et al, NEJM 2019, n=668*) and PRACTICAL (*Hardy et al, Lancet 2019, independent study, n=885*)
 - Significant reduction in severe exacerbations vs SABA alone, and vs maintenance ICS, with small or no difference in symptom control, and lower average ICS dose
 - Patients in RCTs of this regimen **in mild asthma** now total n=9,565
- Both of these studies included inflammatory markers
 - FeNO was significantly reduced by as-needed ICS-formoterol (with average 3-5 doses per week)
 - Reduction in risk of severe exacerbations with as-needed ICS-formoterol was independent of baseline characteristics, including blood eosinophils and exhaled nitric oxide
- An additional RCT of taking ICS whenever SABA is taken (separate inhalers)
 - ASIST, in African-American children 6-17 years with mild asthma, compared with physician-adjusted treatment (*Sumino et al, JACI in Pract 2019, n=206*)

GINA, 2020, References at end

Box 3-5B

Children 6-11 years

Personalized asthma management:

Assess, Adjust, Review response

Symptoms
Exacerbations
Side-effects
Lung function
Child and parent satisfaction

Confirmation of diagnosis if necessary
Symptom control & modifiable risk factors (including lung function)
Comorbidities
Inhaler technique & adherence
Child and parent preferences and goals

Treatment of modifiable risk factors & comorbidities
Non-pharmacological strategies
Asthma medications (adjust down or up)
Education & skills training

Asthma medication options:

Adjust treatment up and down for individual child's needs

PREFERRED CONTROLLER

to prevent exacerbations and control symptoms

Other controller options

RELIEVER

STEP 1

Low dose ICS taken whenever SABA taken*; or daily low dose ICS

STEP 2

Daily low dose inhaled corticosteroid (ICS) (see table of ICS dose ranges for children)

Daily leukotriene receptor antagonist (LTRA), or low dose ICS taken whenever SABA taken*

STEP 3

Low dose ICS-LABA or medium dose ICS

Low dose ICS + LTRA

STEP 4

Medium dose ICS-LABA
Refer for expert advice

High dose ICS-LABA, or add-on tiotropium, or add-on LTRA

STEP 5

Refer for phenotypic assessment ± add-on therapy, e.g. anti-IgE

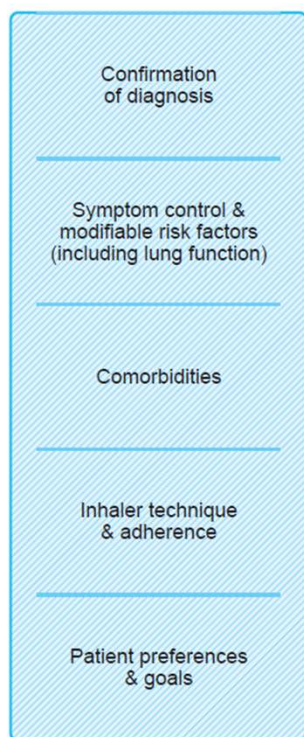

Add-on anti-IL5, or add-on low dose OCS, but consider side-effects

As-needed short-acting β_2 -agonist (SABA)

* Separate ICS and SABA inhalers

SUGGESTED INITIAL CONTROLLER TREATMENT IN ADULTS AND ADOLESCENTS WITH A DIAGNOSIS OF ASTHMA

FIRST ASSESS:

IF:

Symptoms most days, waking at night \geq once a week and low lung function?

YES

Medium dose ICS-LABA (MART or maintenance-only)

STEP 4

NO

Symptoms most days, or waking at night \geq once a week?

YES

Low dose ICS-LABA (MART or maintenance-only)

STEP 3

NO

Symptoms twice a month or more?

YES

Daily low dose ICS or as-needed low dose ICS-formoterol

STEP 2

NO

As-needed low dose ICS-formoterol

STEP 1

Short course OCS may also be needed for patients presenting with severely uncontrolled asthma

SUGGESTED INITIAL CONTROLLER TREATMENT IN ADULTS AND ADOLESCENTS WITH A DIAGNOSIS OF ASTHMA

ASSESS:

Confirmation of diagnosis
Symptom control & modifiable risk factors
(including lung function)

Comorbidities
Inhaler technique & adherence
Patient preferences and goals

START HERE IF:

Symptoms less than twice a month

Symptoms twice a month or more, but less than daily

Symptoms most days, or waking with asthma once a week or more

Symptoms most days, or waking with asthma once a week or more, and low lung function

Short course OCS may also be needed for patients presenting with severely uncontrolled asthma

PREFERRED CONTROLLER
to prevent exacerbations and control symptoms

Other controller options

PREFERRED RELIEVER

Other reliever option

STEP 1

As-needed low dose ICS-formoterol *

Low dose ICS taken whenever SABA is taken †

STEP 2

Daily low dose inhaled corticosteroid (ICS), or as-needed low dose ICS-formoterol *

Daily leukotriene receptor antagonist (LTRA), or low dose ICS taken whenever SABA is taken †

STEP 3

Low dose ICS-LABA

Medium dose ICS, or low dose ICS+LTRA #

STEP 4

Medium dose ICS-LABA

High dose ICS, add-on tiotropium, or add-on LTRA #

STEP 5

High dose ICS-LABA
Refer for phenotypic assessment ± add-on therapy, e.g. tiotropium, anti-IgE, anti-IL5/5R, anti-IL4R

Add low dose OCS, but consider side-effects

As-needed low dose ICS-formoterol *

As-needed low dose ICS-formoterol for patients prescribed maintenance and reliever therapy ‡

As-needed short-acting β_2 -agonist (SABA)

* Data only with budesonide-formoterol (bud-form)

† Separate or combination ICS and SABA inhalers

‡ Low-dose ICS-form is the reliever only for patients prescribed bud-form or BDP-form maintenance and reliever therapy

Consider adding HDM SLIT for sensitized patients with allergic rhinitis and FEV1 >70% predicted

EVALUATING UNCONTROLLED PATIENTS

- Do not use initial treatment tables
- Investigate
 - Watch patient using their inhaler(s)
 - Confirm asthma diagnosis
 - Remove and manage risk factors
 - Consider:
 - Step up treatment
 - Referral to specialist or asthma clinic

Box 3-5A

Adults & adolescents 12+ years

GINA 2020, Box 3-5A

ASSESSING INHALER TECHNIQUE

Metered dose inhalers (MDI)

- Aerosol
 - With or without spacer
- Respimat
- Breath-actuated

Dry powder inhaler (DPI)

MDI- AEROSOLS

- **Flovent® HFA** (fluticasone propionate)
- **Ventolin® HFA /Proventil® HFA** (albuterol sulfate)
- **Advair® HFA** (Fluticasone propionate/salmeterol xinafoate)
- **Atrovent® HFA** (Ipratropium bromide)
- **Alvesco® HFA** (ciclesonide)
- **Asmanex® HFA** (mometasone furoate)
- **QVAR® HFA** (beclomethasone dipropionate)
- **ProAir® HFA** (albuterol sulfate)
- **Symbicort® HFA** (budesonide/formoterol fumarate dihydrate)
- **Xopenex® HFA** (albuterol sulfate)

MDI- AEROSOL GENERAL INSTRUCTIONS (WITHOUT SPACER)

1. Remove cap
2. Look inside the mouthpiece for foreign objects
3. Hold inhaler **upright** and **shake well**
4. **Prime device (test spray) by spraying 3-4 times**
 - a. **ONLY prior to 1st use OR inhaler has not been used in a couple days***
 - b. ***Check specific device for desinated time**
5. Breathe out fully & gently, **away from the inhaler**
6. Put mouthpiece between teeth without biting and close lips to form good seal

MDI- AEROSOL GENERAL INSTRUCTIONS (WITHOUT SPACER)- CONT.

7. Start to **breathe in deeply & slowly through mouth and, at the same time, press down firmly on canister**

8. Continue to breathe in slowly and deeply

9. **Hold breath** for about 5 seconds or as long as comfortable

10. While holding breath, remove inhaler from mouth

11. Breathe out gently, **away from the inhaler**

12. If an extra dose is needed, repeat steps in about 30 seconds

13. Replace cap

[Instructional Video](#)

MDI- AEROSOL GENERAL INSTRUCTIONS (WITH SPACER)

1. Take off the cap
2. Look inside the mouthpiece for foreign objects
3. **Shake the inhaler well**, if necessary (noted for each individual brand of inhaler in rows below)
4. Attach the spacer and the inhaler together, with the inhaler's canister in a **vertical position**
5. Breathe out fully through the mouth, away from the inhaler
6. Put the mouthpiece of the spacer between the teeth and tighten the lips around it (or if you use a spacer with a mask, position the mask over the nose and mouth and make sure there's a tight seal against the cheeks and chin)

MDI- AEROSOL GENERAL INSTRUCTIONS (WITH SPACER)- CONT.

7. **Press the canister down** and inhale deeply and slowly through the mouth

8. Move the mouthpiece away from the mouth

9. **Hold the breath** for as long as comfortably possible, ~ 10 seconds

10. Breathe out

11. Wait before repeating, usually 30 to 60 seconds

[Instructional Video 1](#)

[Instructional Video 2](#)

MDIS - RESPIMAT (SOFT-MIST INHALERS)

- **Combivent® Respimat**
 - (ipratropium bromide and albuterol)
- **Spiriva® Respimat®**
 - (tiotropium bromide)
- **Stiolto™ Respimat®**
 - (tiotropium bromide and olodaterol)
- **Striverdi® Respimat®**
 - (olodaterol hydrochloride)

MDIS - RespiMAT (SOFT-MIST INHALERS) GENERAL INSTRUCTIONS

1. Hold cap and **Turn** clear base counterclockwise.
2. **Open** cap.
3. To prime, point inhaler to ground and press the dose release button.
4. To use, exhale completely and then place mouth over mouthpiece.
5. **Press** the dose release button and take a slow, deep breath.
6. Hold for at least 10 seconds and replace cap.

Instructional Video

DRY POWDER INHALERS- HANDIHALER

1. Press on the green button and lift the cap upwards to open
2. Pull the mouthpiece ridge up and away from the base so the center chamber is showing
3. Insert Spiriva capsule insert it into the chamber. Close the mouthpiece, you should hear a click
4. Press the green piercing button. Do NOT shake the device
5. Turn head away from the inhaler and breathe out fully
6. Raise the HandiHaler to your mouth in a horizontal position and close your lips around the mouthpiece. Breathe in **deeply** and **fully**.
7. Remove inhaler from your mouth and hold your breath for a few seconds. Breathe normally.
8. Repeat the last two steps to receive the full dose

DRY POWDER INHALERS (DPIS)- DISKUS

- **Advair® Diskus®** (fluticasone-salmeterol)
- **Serevent® Diskus®** (salmeterol xinafoate)

Dry Powder Inhalers (DPIs)- Diskus

- General Instructions

1. Open the inhaler using the thumb grip
2. Hold the inhaler **flat and level**, and slide the lever from left to right until it clicks
3. Breathe out fully through the mouth, away from the inhaler
4. Put the mouthpiece in the mouth and tighten the lips around it
5. Inhale **forcefully, quickly and deeply** through the mouth
6. Remove the device from the mouth
7. Hold the breath as long as comfortably possible, up to 10 seconds
8. Use the thumb grip to close the inhaler

[Instructional video](#)

DRY POWDER INHALERS (DPIS)- ELLIPTA

- **Arnuity® Ellipta®** (fluticasone furoate)
- **Breo® Ellipta®** (fluticasone furoate and vilanterol)
- **Incruse® Ellipta®** (umeclidinium)
- **Anoro® Ellipta®** (umeclidinium and vilanterol)
- **Trelegy® Ellipta®** (Fluticasone Furoate/Umeclidinium/Vilanterol)

Dry Powder Inhalers (DPIs)- ELLIPTA- GENERAL INSTRUCTIONS

1. Slide the inhaler cover down to reveal the mouthpiece
2. Breathe out fully through the mouth, away from the inhaler
3. Put the mouthpiece between the lips
4. Do not block the air vents with the fingers
5. Breathe in **deeply and slowly** through the mouth
6. Remove the inhaler from the mouth
7. **Hold the breath** for 3 or 4 seconds or as long as comfortably possible
8. Close the inhaler

[Instructional video](#)

ASSESSING SYMPTOMS

- Daytime symptoms
- Nighttime symptoms
- Quick Relief or Rescue Inhaler Use
 - SABA use evaluated; not enough data to know if ICS-SABA use correlates
- Activity Level

ASSESSING SYMPTOMS

1. Baylor College of Medicine's Rules of Two®

- Do you have asthma symptoms or use your quick-relief inhaler more than **two** times per week?
- Do you awaken at night with symptoms more than **two** times per month?
- Do you refill your quick-relief inhaler more than **two** times per year?
- If you answer "yes" to one or more questions, your asthma may not be well controlled. Plan a visit with your healthcare provider and share your results.

2. Asthma Control Test™

- Answer five questions about your asthma to determine if your asthma is well controlled. There is a test for children and adults. This assessment provides a score. Share the results with your healthcare provider.

CHOOSING THERAPIES – MEDICATION PEARLS

- ICS dose tables (NOT equivalency charts) for different age groups
 - Start at the lowest ICS dose needed
 - Most patients don't need high dose ICS
 - Titrate to responsiveness, symptoms, adherence
- LABA
 - Not all created equal

LOW, MEDIUM AND HIGH ICS DOSES: ADULTS/ADOLESCENTS

| Adults and adolescents (12 years and older) | | | |
|---|----------------------------|-----------|-------|
| Inhaled corticosteroid | Total daily ICS dose (mcg) | | |
| | Low | Medium | High |
| Beclometasone dipropionate (pMDI, standard particle, HFA) | 200-500 | >500-1000 | >1000 |
| Beclometasone dipropionate (pMDI, extrafine particle*, HFA) | 100-200 | >200-400 | >400 |
| Budesonide (DPI) | 200-400 | >400-800 | >800 |
| Ciclesonide (pMDI, extrafine particle*, HFA) | 80-160 | >160-320 | >320 |
| Fluticasone furoate (DPI) | 100 | | 200 |
| Fluticasone propionate (DPI) | 100-250 | >250-500 | >500 |
| Fluticasone propionate (pMDI, standard particle, HFA) | 100-250 | >250-500 | >500 |
| Mometasone furoate (DPI) | 200 | | 400 |
| Mometasone furoate (pMDI, standard particle, HFA) | 200-400 | | >400 |

This is NOT a table of equivalence. These are suggested total daily doses for the 'low', 'medium' and 'high' dose treatment options with different ICS.

DPI: dry powder inhaler; HFA: hydrofluoroalkane propellant; pMDI: pressurized metered dose inhaler (non-CFC); * see product information

GINA 2020, Box 3-6A

CHOOSING THERAPIES – MEDICATION PEARLS

- Montelukast
 - Risk of serious neuropsychiatric events, including suicidality
- Ffluticasone furoate, umecclidinium & vilanterol (Trelegy)
 - Improved lung function and FEV1 but not in exacerbations compared to patients uncontrolled on LABA/ICS alone (CAPTAIN study)
- Tiotropium (Spiriva)
 - Additional benefit of LAMA to prevent exacerbations and hospitalizations seen in real world studies
- Biologics
 - New studies for younger patients
 - Each has its own criteria for selection

FDA requires Boxed Warning about serious mental health side effects for asthma and allergy drug montelukast (Singulair); advises restricting use for allergic rhinitis

Risks may include suicidal thoughts or actions

SPECIALIST CARE; SEVERE ASTHMA CLINIC IF AVAILABLE

Assess and treat severe asthma phenotypes *cont'd*

Continue to optimize management as in section 3 (including inhaler technique, adherence, comorbidities)

6b Consider add-on biologic Type 2 targeted treatments

- Consider add-on Type 2-targeted biologic for patients with exacerbations or poor symptom control on high dose ICS-LABA, who:
 - have eosinophilic or allergic biomarkers, or
 - need maintenance OCS
- Consider **local payer eligibility criteria** and **predictors of response** when choosing between available therapies
- Also consider cost, dosing frequency, route (SC or IV), patient preference

Which biologic is appropriate to start first?

Anti-IgE

Is the patient eligible for **anti-IgE** for severe allergic asthma?

- Sensitization on skin prick testing or specific IgE
- Total serum IgE and weight within dosage range
- Exacerbations in last year

What factors may predict good asthma response to anti-IgE?

- Blood eosinophils $\geq 260/\mu\text{l}$ ++
- FeNO ≥ 20 ppb +
- Allergen-driven symptoms +
- Childhood-onset asthma +

Anti-IL5 / Anti-IL5R

Is the patient eligible for **anti-IL5 / anti-IL5R** for severe eosinophilic asthma?

- Exacerbations in last year
- Blood eosinophils $\geq 300/\mu\text{l}$

What factors may predict good asthma response to anti-IL5/5R?

- Higher blood eosinophils +++
- More exacerbations in previous year +++
- Adult-onset of asthma ++
- Nasal polyposis ++

Anti-IL4R

Is the patient eligible for **anti-IL4R** ... for severe eosinophilic asthma?

- Exacerbations in last year
- Blood eosinophils $\geq 150/\mu\text{l}$ or FeNO ≥ 25 ppb
- ... or because of need for maintenance OCS?

What factors may predict good asthma response to anti-IL4R?

- Higher blood eosinophils +++
- Higher FeNO +++

Anti-IL4R may also be used to treat

- Moderate/severe atopic dermatitis
- Nasal polyposis

Eligible for none?

Return to section 6a

Choose one if eligible; trial for at least 4 months and assess response

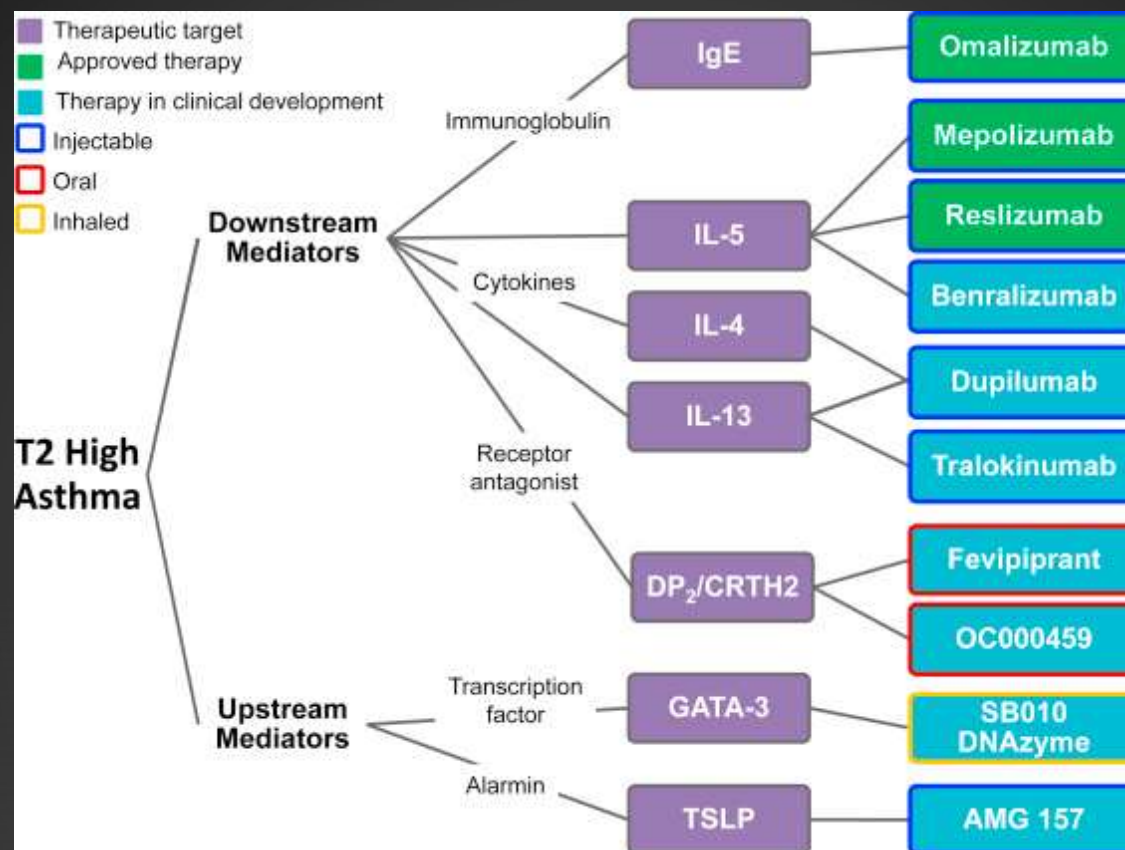

Good asthma response?

yes
Good response to T2-targeted therapy

STOP add-on

Consider switching to a different Type 2-targeted therapy, if eligible

Little/no response to T2-targeted therapy

ASTHMA AND COPD OVERLAP

- Asthma: never treat with bronchodilators alone (risk of death, hospitalization, severe exacerbations)
- COPD: start treatment with LABA and/or LAMA without ICS
- Patients with diagnoses of both asthma and COPD are more likely to die or be hospitalized if treated with LABA vs ICS-LABA (*Gershon et al, JAMA 2014; Kendzerska et al, Annals ATS 2019*)
- High dose ICS may be needed for severe asthma, but should not be used in COPD (risk of pneumonia)

COPD

COPD

- Persistent respiratory symptoms, likely from exposure to noxious particles
- Assessed by:
 - Imaging
 - Lung volume, capacity spirometry
 - Oximetry
 - Exercise testing

CLASSIFICATION OF AIRFLOW LIMITATION SEVERITY IN COPD (BASED ON POST-BRONCHODILATOR FEV₁)

In patients with FEV₁/FVC < 0.70:

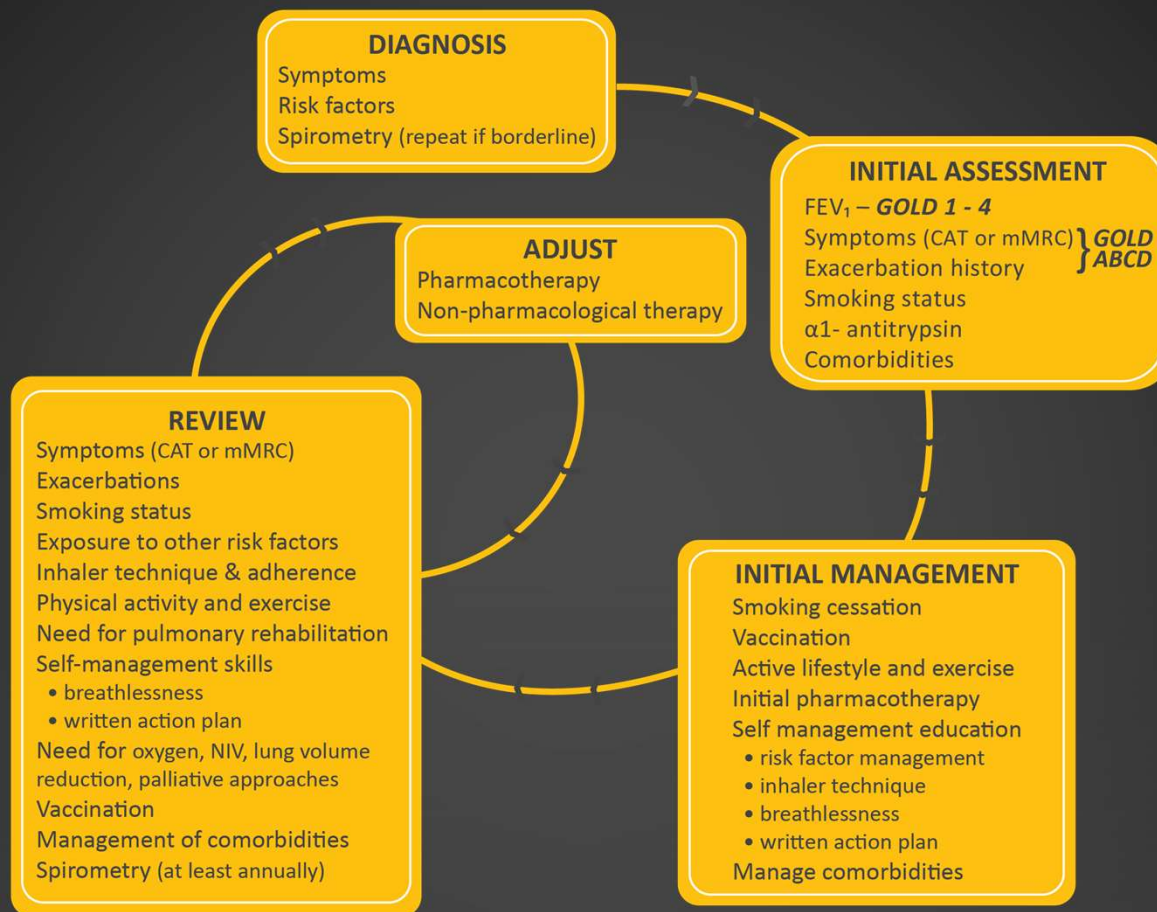

| | | |
|---------|-------------|--|
| GOLD 1: | Mild | FEV ₁ ≥ 80% predicted |
| GOLD 2: | Moderate | 50% ≤ FEV ₁ < 80% predicted |
| GOLD 3: | Severe | 30% ≤ FEV ₁ < 50% predicted |
| GOLD 4: | Very Severe | FEV ₁ < 30% predicted |

What is NOT COPD?

- TB
- CHF
- Bronchiectasis
- Other bronchiolitis conditions

GOLD, 2021 Edition

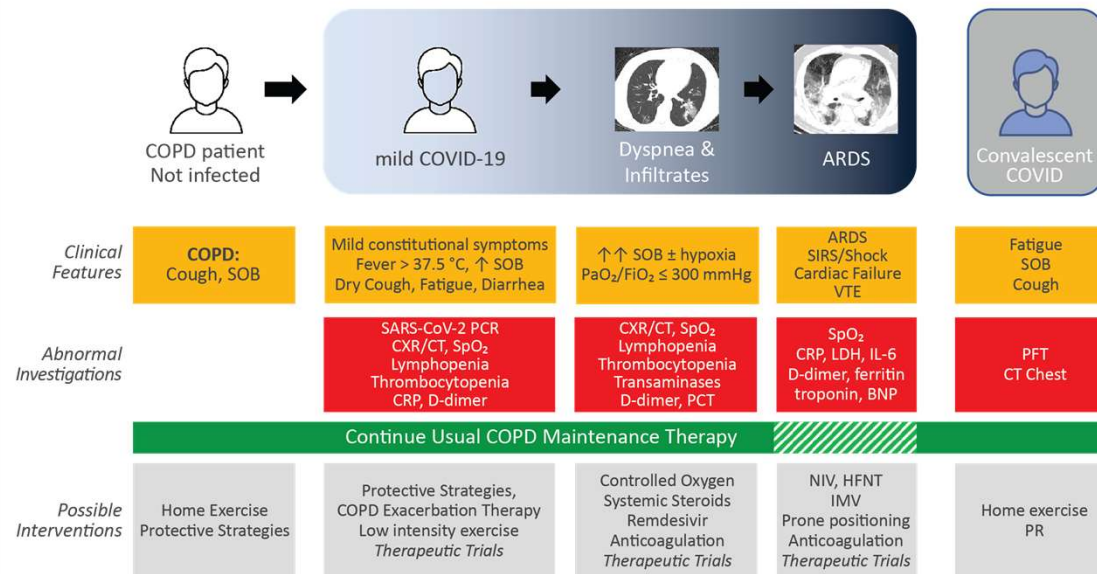

MANAGEMENT OF COPD

COVID CONSIDERATIONS

- Limit spirometry
- Stick to evidence based risk reduction and risk reduction
- Maintain exercise and vaccines
- Continue medications and ensure refills

COVID-19 & COPD

(ARDS, Adult respiratory distress syndrome; BNP, brain natriuretic peptide; CRP, C reactive protein; CT, computed tomography; CXR, chest radiograph; HFNT, high flow nasal therapy; IL-6, interleukin 6; IMV, invasive mechanical ventilation; LDH, lactate dehydrogenase; NIV, non-invasive ventilation; PCT, procalcitonin; PFT, pulmonary function tests; PR, pulmonary rehabilitation; SOB, Shortness of breath; SpO₂, peripheral oxygen saturation; VTE, venous thromboembolism)

The American Journal of Respiratory and Critical Care Medicine is an official journal of the American Thoracic Society

EVERYONE GETS SMOKING CESSATION

- Combination therapy is the way to go
 - NRT, Bupropion, Varenicline, CBT, MI
- Revisit this at EVERY visit for COPD follow up

EVERYONE DOES NOT GET ICS

- Reserved for more exacerbations and more severe COPD
 - Always with a LABA
- Triple therapy LABA/LAMA/ICS improves lung function, symptoms & health status
 - May improve mortality in symptomatic patients with severe or frequent exacerbations
- But... increased pneumonia risk
- Other anti-inflammatories such as azithromycin or erithromycin reduce exacerbations if taken over a year

GOLD, 2021 Edition

▶ FACTORS TO CONSIDER WHEN INITIATING ICS TREATMENT ▶

Factors to consider when initiating ICS treatment in combination with one or two long-acting bronchodilators (note the scenario is different when considering ICS withdrawal):

| • STRONG SUPPORT • | • CONSIDER USE • | • AGAINST USE • |
|--|--|---|
| <ul style="list-style-type: none"> • History of hospitalization(s) for exacerbations of COPD[#] • ≥ 2 moderate exacerbations of COPD per year[#] • Blood eosinophils >300 cells/μL • History of, or concomitant, asthma | <ul style="list-style-type: none"> • 1 moderate exacerbation of COPD per year[#] • Blood eosinophils 100-300 cells/μL | <ul style="list-style-type: none"> • Repeated pneumonia events • Blood eosinophils <100 cells/μL • History of mycobacterial infection |

[#]despite appropriate long-acting bronchodilator maintenance therapy (see Table 3.4 and Figure 4.3 for recommendations);

*note that blood eosinophils should be seen as a continuum; quoted values represent approximate cut-points; eosinophil counts are likely to fluctuate.

INITIAL ASSESSMENT

GOAL:

- Reduce symptoms
- Reduce risk and progression

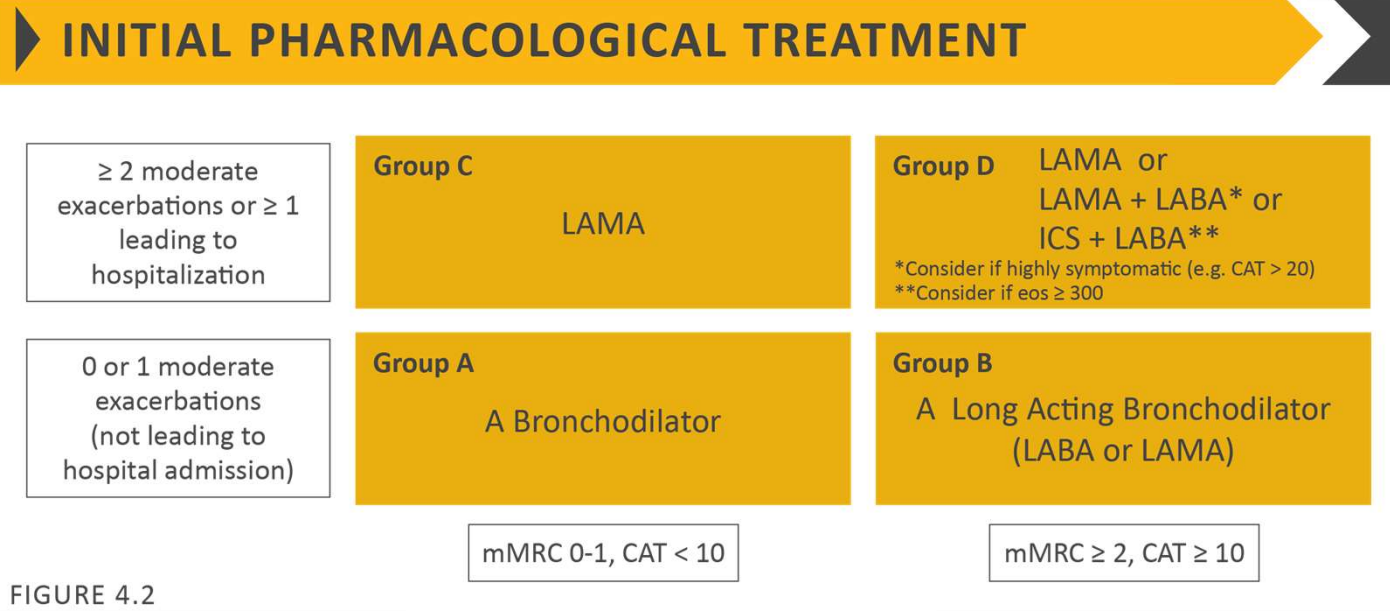

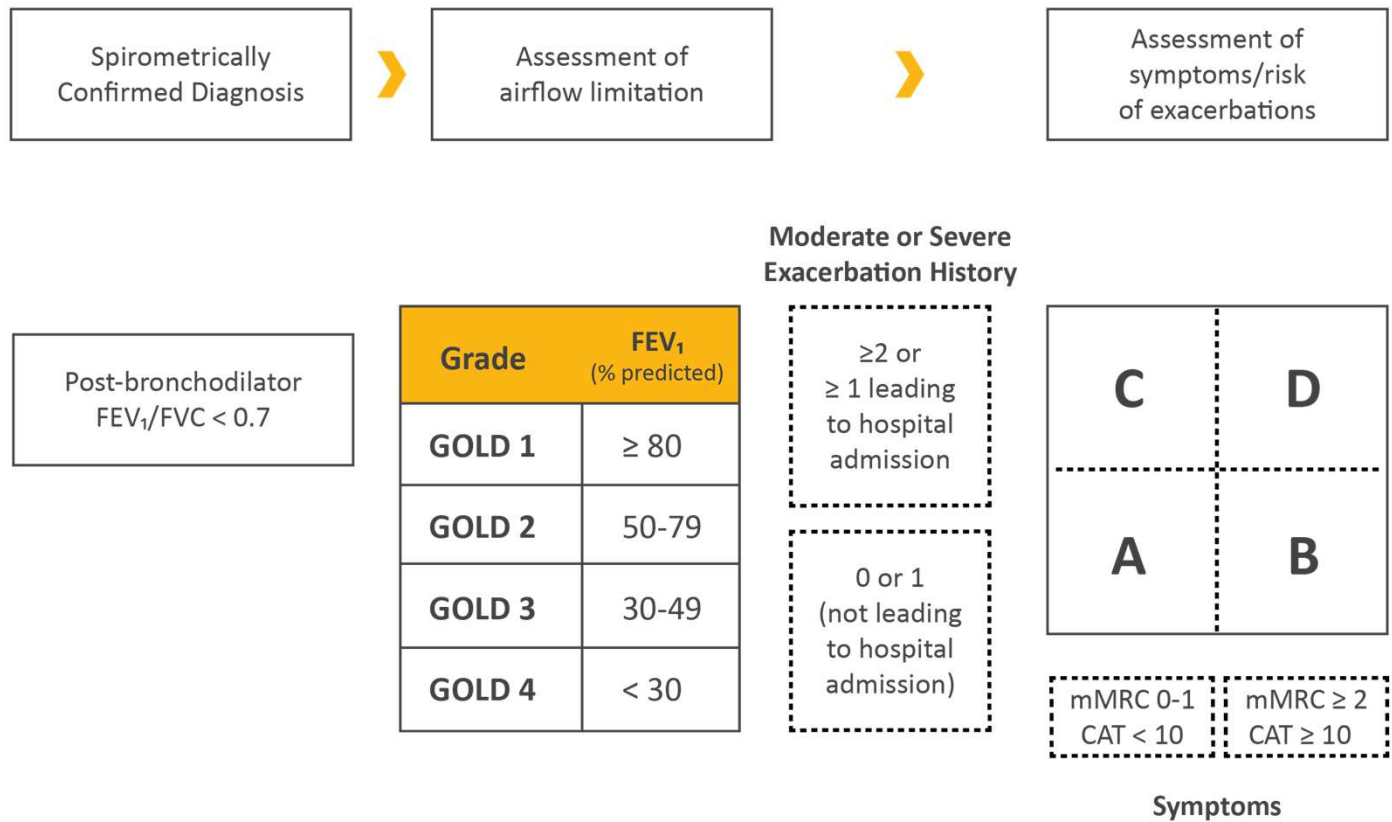

FIGURE 4.2

▶ THE REFINED ABCD ASSESSMENT TOOL

INITIAL ASSESSMENT

GOAL:

- Reduce symptoms
- Reduce risk and progression

INITIAL PHARMACOLOGICAL TREATMENT

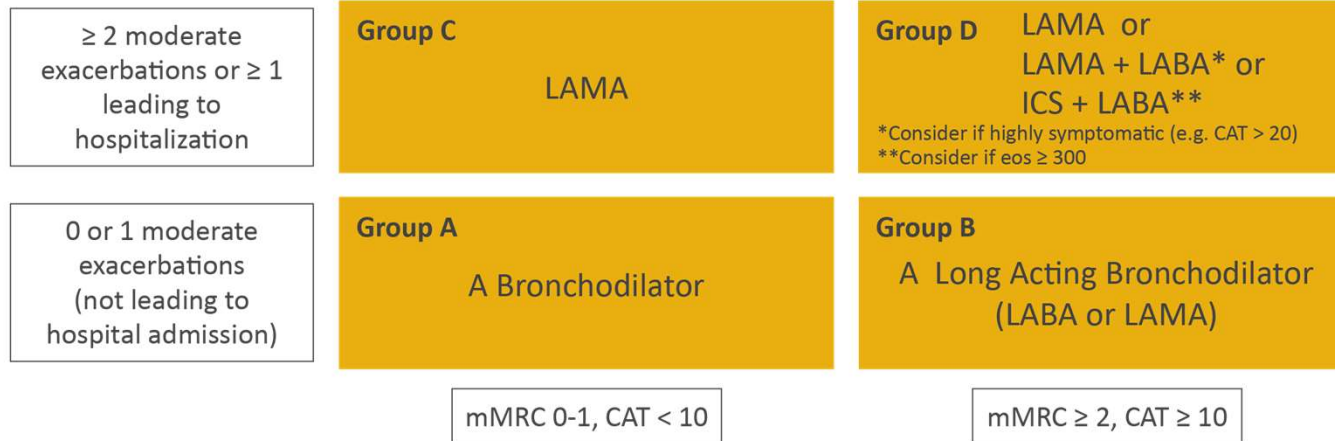

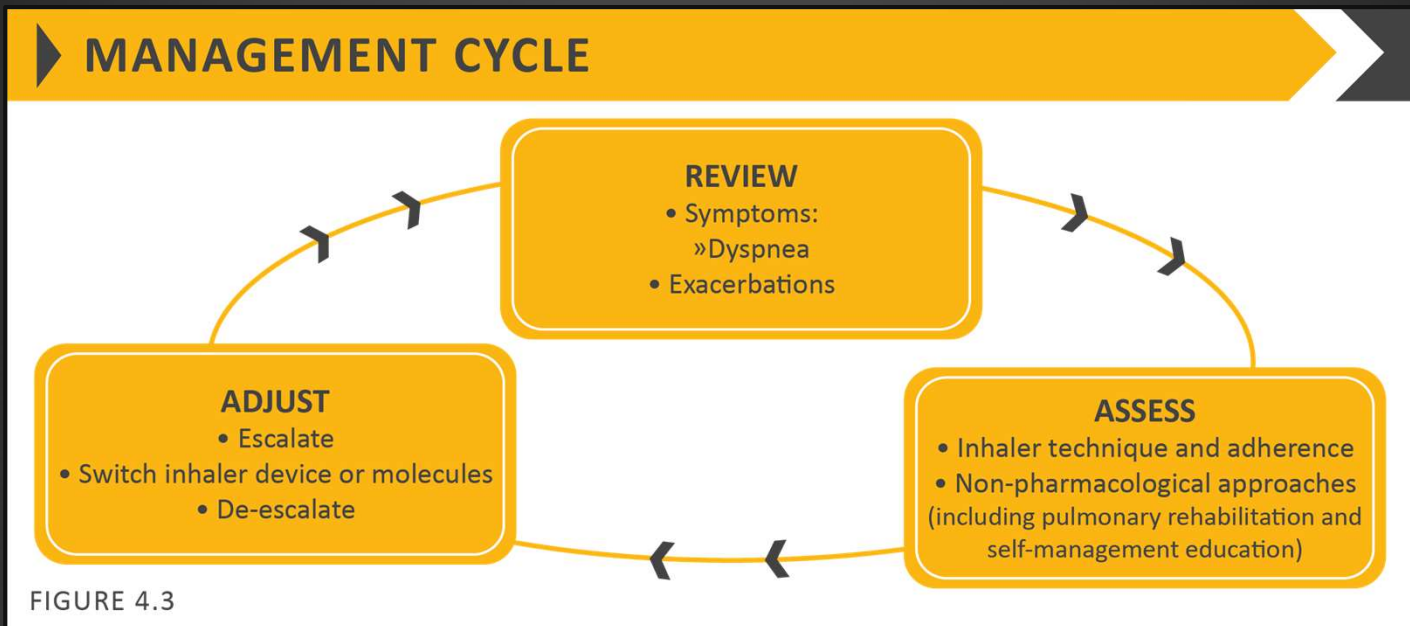

FIGURE 4.2

- Patients with almost daily symptoms need a LAMA or LABA
- Worsening patients should be evaluated for triggers, risks, and inflammatory component (blood eosinophils)

GOLD, 2021 Edition

WHAT'S NEXT

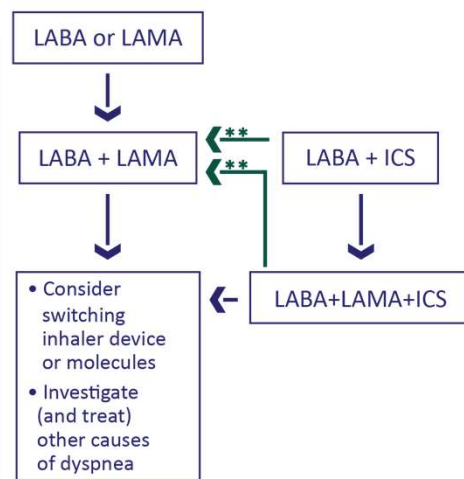

▶ FOLLOW-UP PHARMACOLOGICAL TREATMENT

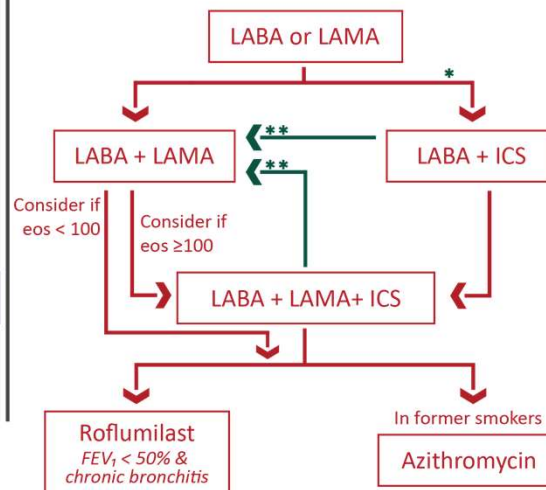

1. IF RESPONSE TO INITIAL TREATMENT IS APPROPRIATE, MAINTAIN IT.

2. IF NOT:
- ✓ Consider the predominant treatable trait to target (dyspnea or exacerbations)
 - Use exacerbation pathway if both exacerbations and dyspnea need to be targeted
 - ✓ Place patient in box corresponding to current treatment & follow indications
 - ✓ Assess response, adjust and review
 - ✓ These recommendations do not depend on the ABCD assessment at diagnosis

• DYSPNEA •

• EXACERBATIONS •

eos = blood eosinophil count (cells/ μ L)

* Consider if *eos* \geq 300 or *eos* \geq 100 AND \geq 2 moderate exacerbations / 1 hospitalization

** Consider de-escalation of ICS or switch if pneumonia, inappropriate original indication or lack of response to ICS

FIGURE 4.4

▶ INTERVENTIONS THAT REDUCE THE FREQUENCY OF COPD EXACERBATIONS

| INTERVENTION CLASS | INTERVENTION |
|------------------------------------|---|
| Bronchodilators | LABAs LAMAs LABA + LAMA |
| Corticosteroid-containing regimens | LABA + ICS LABA + LAMA + ICS |
| Anti-inflammatory (non-steroid) | Roflumilast |
| Anti-infectives | Vaccines Long Term Macrolides |
| Mucoregulators | N-acetylcysteine Carbocysteine Erdosteine |
| Various others | Smoking Cessation Rehabilitation Lung Volume Reduction Vitamin D |

LETS TALK ABOUT INHALER TECHNIQUE...AGAIN

- 2/3 of patients don't use correctly
 - 23% used DPIs correctly at discharge for COPD
 - Very low adherence rates
 - Low lung capacity, age, cognitive function as predictors

Sulaiman I, et al. Objective Assessment of Adherence to Inhalers by Patients with Chronic Obstructive Pulmonary Disease. Am J Respir Crit Care Med. 2017 May 15;195(10)

KEY QUESTIONS TO ASK

- Show me how you use it
 - Look for a forceful inhalation with DPIs
- Are they treating it like other scheduled meds?
- Is cost undermining adherence?
- Are they tracking benefit?

INSURANCE COVERAGE

- Generic options or specific brands are sometimes preferred
- Advocate for a medication your patient needs
 - Prior Authorization
 - Tier lowering
 - Coupons
- Spacers usually not covered but worth the investment

PULMONARY AGENTS

ANTICOLINERGICS: INHALED

SHORT-ACTING BRONCHODILATORS

ATROVENT HFA® (ipratropium)
COMBIVENT® RESPIMAT (ipratropium/albuterol)

Incruse Ellipta/ Tudorza: The patient has had documented side effect, allergy or treatment failure Spiriva.

Duaklir Pressair, Stiolto Respimat: The patient has a documented side effect,

(No PA required unless otherwise noted)

QTY LIMIT: 3 inhalers (12 grams)/90 days
IPRATROPIUM NEBULIZER SOLN
IPRATROPIUM/ALBUTEROL NEBULIZER SOLN

LONG-ACTING BRONCHODILATORS (LAMA)

SPIRIVA® HANDIHALER (tiotropium)

QTY LIMIT: 1 capsule/day
SPIRIVA® RESPIMAT (tiotropium)
QTY LIMIT: 3 inhalers/90 days

COMBINATION LONG-ACTING BRONCHODILATORS (LAMA & LABA)

ANORO® ELLIPTA (umeclidinium/vilanterol)

QTY LIMIT: 3 inhalers (180 blisters)/90 days
BEVESPI AEROSPHERE®
(glycopyrrolate/formoterol)
QTY LIMIT: 3 inhalers/90 days

LAMA/LABA/ICS COMBINATION

All products require PA

NON-PREFERRED AGENTS

(PA required)

Incruse Ellipta® (umeclidinium bromide)

QTY LIMIT: 1 inhaler/30 days
Lonhala® Magnair (glycopyrrolate) inhalation solution
QTY LIMIT: 60 vials/30 days
Tudorza® Pressair® (aclidinium bromide)
QTY LIMIT: 3 inhalers/90 days
Yupelri™ (revefenacin) inhalation solution
QTY LIMIT: 300 vials/30 days

Duaklir® Pressair (aclidinium bromide/ formoterol fumarate)

QTY LIMIT: 3 inhalers/90 days
Stiolto® Respimat (tiotropium/olodaterol)
QTY LIMIT: 3 inhalers/90 days

Breztri® Aerosphere
(budesonide/glycopyrrolate/formoterol fumarate)

QTY LIMIT: 1 inhaler (120 blisters)/30 days
Trelegy® Ellipta (fluticasone/umeclidinium/vilanterol)
QTY LIMIT: 1 inhaler (60 blisters)/30 days

PA CRITERIA

allergy, or treatment failure to TWO preferred LAMA/LABA combinations.

Lonhala Magnair, Yupelri: patient has a diagnosis of COPD (not FDA approved for asthma) AND has a failure of nebulized ipratropium solution AND at least 3 inhaled LAMAs.

Breztri: patient has a diagnosis of COPD (not FDA approved for asthma) AND patient has a treatment failure of at least 2 different combinations of a preferred Inhaled Corticosteroid, LABA, and LAMA used in combination for a minimum of 30 consecutive days AND patient has a documented side effect, allergy, treatment failure, or contraindication with Trelegy Ellipta.

Trelegy Ellipta: patient has a treatment failure of at least 2 different combinations of a preferred Inhaled Corticosteroid, LABA, and LAMA used in combination for a minimum of 30 consecutive days.

Pulmicort Respules: The patient requires a nebulizer formulation AND if the dose is 1 mg, the patient must be unable to use two 0.5 mg vials AND the patient has a documented intolerance to the generic. |

MEDICARE

- GO TO MEDICARE WEBSITE AND LOOK AT DRUG PLANS

Answer a few quick questions

What type of 2021 coverage are you looking for?

You must have Medicare before you can enroll in a Medicare Advantage Plan or Drug plan (Part D). Outside Open Enrollment (October 15 - December 7) you can enroll only during specific times, like your Initial Enrollment Period or a Special Enrollment Period. [Learn more about when you can enroll.](#)

- ☐ I want to learn more about Medicare options before I see plans
- ☐ Medicare Advantage Plan
- ☒ Drug plan (Part D)

Adds drug coverage to Original Medicare.

- ☐ Drug plan (Part D) + Medigap policy
- ☐ Medigap policy only

| Monthly totals | \$39,479.29 | \$39,479.29 | \$404.02 | \$10,067.10 | \$2,223.84 |

¹ This plan does not cover this drug, the price shown is the full cash price.

Estimated total drug + premium cost

You will pay **\$22,201.12** per year on drug + premium costs.

Based on current drug costs, it's estimated that:

IN SUMMARY

- Asthma patients need PRN ICS with SABA or formoterol
- COPD patients usually don't need an ICS but do need repeat smoking cessation and likely a LAMA or LABA
- Extra considerations should be taken during COVID
 - Routine follow up
 - Checking inhaler technique and adherence

RESCUE INHALER

What is the most appropriate agent for a 33 year old female newly diagnosed with mild asthma who reports symptoms 2-3 times per month?

- A. Terbutaline 0.5mg 1 puff q4h prn for shortness of breath or wheezing
- B. Proair 90mcg 1-2 puffs q4t6hr prn for shortness of breath or wheezing
- C. Pulmicort 90mcg 1 puff BID and Ventolin 90mcg 1-2 puffs q4t6hr prn shortness of breath or wheezing
- D. Symbicort 80/4.5 1-2 puffs q4-6 hr prn for shortness of breath or wheezing

CORRECT INHALER USE

- What words correctly describe a patient's inhalation technique with a Dry Powder Inhaler?

A. Forceful

B. Deep

C. Slow

D. Quick

E. Breathe-Actuated

BBW ADDED

- Which medication had a block box warning added in 2020 for risk of serious neuropsychiatric events?
- A. Trelegy
 - B. Chantix
 - C. Montelukast
 - D. Mepolizumab

TRIPLE THERAPY USED FOR

- What is triple therapy of LABA/LAMA/ICS (Trelegy Ellipta) approved for?
 - A. Asthma
 - B. COPD
 - C. Acute Bronchospasm
 - D. Both Asthma and COPD
