Footnotes:

1. P - Payment Measure, R - Reporting Measure
2. ACO All-Cause Reamissions rate reflects an observed to expected ratio. The numerator is the number of readmissions observed and the denominator is the number of readmissions that were expected based on risk of the population.
3. ACO All-Cause Readmissions and Diabetes Mellitus: Hemoglobin A1c Poor Control (>9%) are inverse measures, lower rate indicates better performance.
4. CAHPS Patient Experience: Rating of Personal Doctor is a composite measure with variable numerators.
5. Developmental Screening in the First Three Years of Life only uses BCBSVT claims data which may not include all OCV attributed members
