Footnotes:

1. P - Payment Measure, R - Reporting Measure
2. ACO All-Cause Reamissions rate reflects an observed to expected ratio. The numerator is the number of readmissions observed and the denominator is the number of readmissions that were expected based on risk of the population.
3. ACO All-Cause Readmissions and Diabetes Mellitus: Hemoglobin A1c Poor Control (>9%) are inverse measures, lower rate indicates better performance.
4. There is not a valid benchmark for Follow-Up after Hospitalization for Mental Illness (7-Day Rate) measure, the plan and ACO agree to use N/A since no points or financial risk in PY2022.
5. Updated results for the FUA and FUM measure were inadvertently omitted from the original scorecard. Information contained above represents data for the entire QHP population.

Information

1. All measures are considered reporting measures in performance year 2022 (indicated by “R”)
2. Patient experience was evaluated using the CAHPS Patient Centered Medical Home (PCMH) Annual Composite Survey
